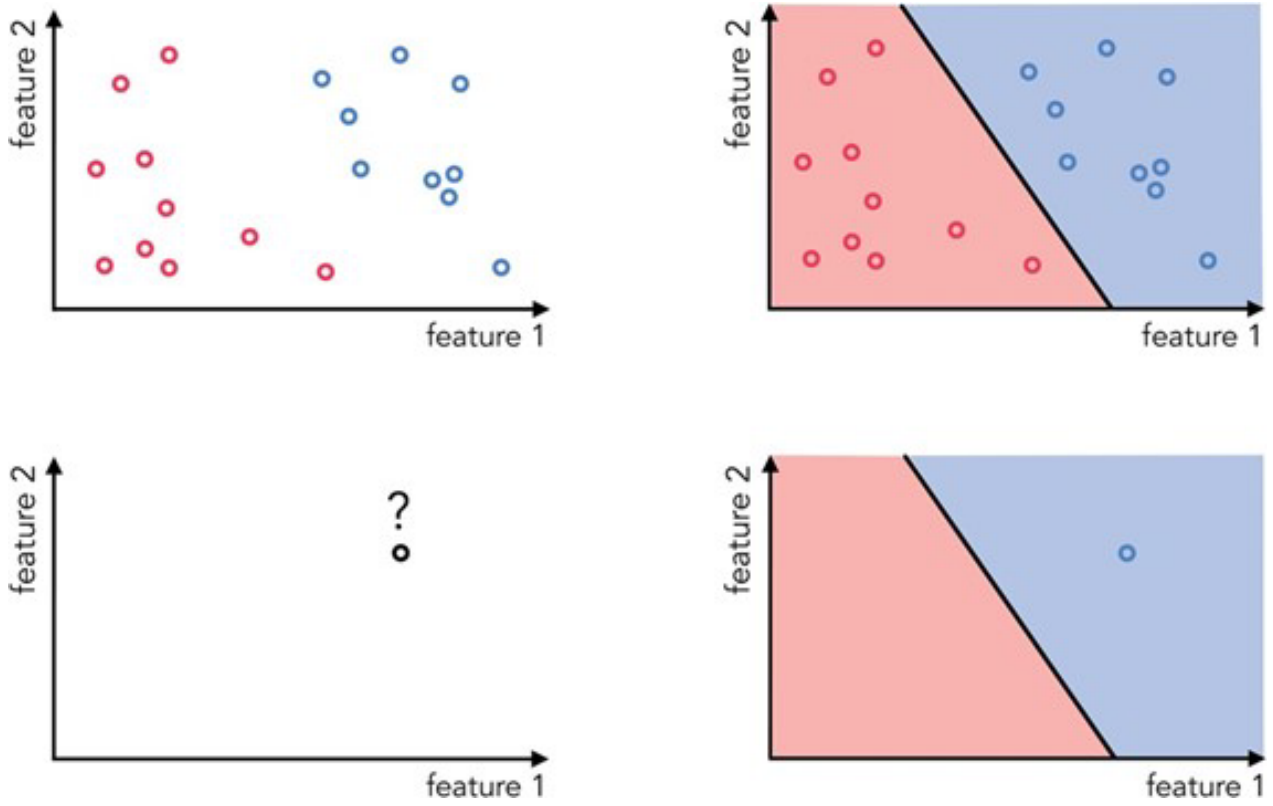
Machine learning primer

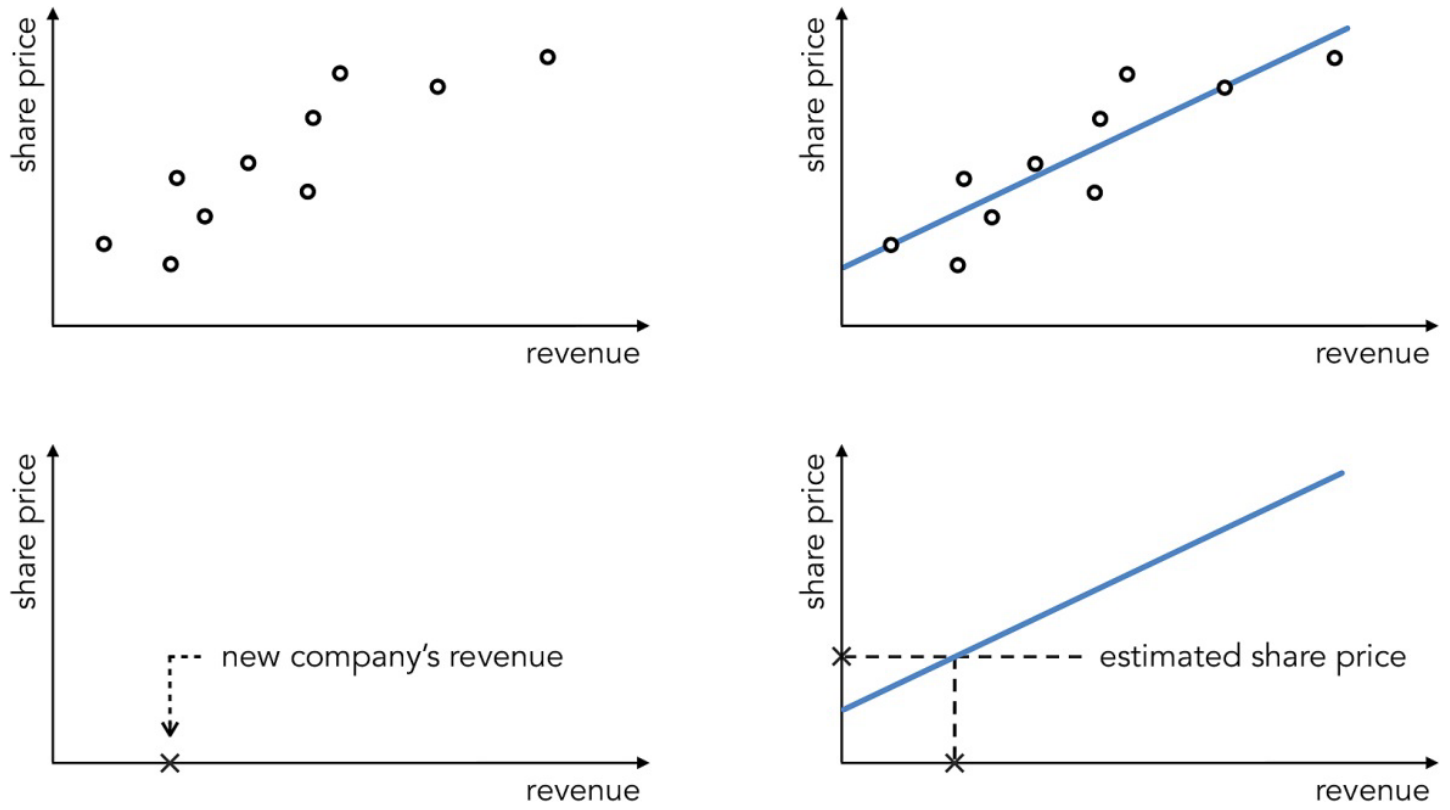
JOANNA BYSZUK & JEREMI OCHAB

DHSI 2024, “DIY COMPUTATIONAL TEXT ANALYSIS WITH R“

Task examples: classification



Task examples: regression



Generalizacja

OBSERVATIONS

- the best hypothesis on the sample may not be the best overall.
- generalization is not memorization.
- complex rules (very complex separation surfaces) can be poor predictors.
- trade-off: complexity of hypothesis set vs sample size (underfitting/overfitting).

Terms and definitions

Example: item, instance of the data used.

Features: attributes associated to an item, often represented as a vector (e.g., word counts).

Labels: category (classification) or real value (regression) associated to an item.

Data:

- training data (typically labeled).
- test data (labeled but labels not seen).
- validation data (labeled, for tuning parameters).

Learning stages

Bias-variance tradeoff

Regression			
Afshine Amidi, Shervine Amidi. *Machine Learning cheatsheets for Stanford's CS 229*. (2018).

Bias-variance tradeoff

	Underfitting	Just right	Overfitting
Regression			
Afshine Amidi, Shervine Amidi. *Machine Learning cheatsheets for Stanford's CS 229*. (2018).

Bias-variance tradeoff

	Underfitting	Just right	Overfitting
Symptoms	▪ High training error ▪ Training error close to test error ▪ High bias	▪ Training error slightly lower than test error	▪ Low training error ▪ Training error much lower than test error ▪ High variance
Regression			
Afshine Amidi, Shervine Amidi. *Machine Learning cheatsheets for Stanford's CS 229*. (2018).

	Underfitting	W sam raz	Overfitting
Symptoms	▪ High training error ▪ Training error close to test error ▪ High bias	▪ Training error slightly lower than test error	▪ Low training error ▪ Training error much lower than test error ▪ High variance
Regression			Classification			Deep learning			Remedies?	▪ complexify model ▪ Add more features ▪ Train longer		▪ Regularise ▪ Get more data

Generalisation

OBSERVATIONS

- the best hypothesis on the sample may not be the best overall.
- generalization is not memorization.
- complex rules (very complex separation surfaces) can be poor predictors.
- trade-off: complexity of hypothesis set vs sample size (underfitting/overfitting).
